INTELLIGENT TEMPERATURE SCREENING KIOSK

With Accurate Mask Detection

The COVID-19 pandemic has spread throughout the world and significantly affected every aspect of daily life. Even not every confirmed case of COVID-19 may have a fever; it is still one of the common symptoms while infected. Wearing face masks have also become a way to reduce the virus's spread especially in busy, crowded, and closed public spaces.

Shuttle's Intelligent Temperature Screening Kiosk is integrated with advanced AI and face detection technology. It allows visitors and employees to walk up to the kiosk and get temperature scanned automatically without touching the screen, as well as to detect whether they are wearing a mask through face positioning. This kiosk can be placed anywhere indoors, and now it comes with 15.6-inch and 21-inch panel for selection.
